replant

repeat

working forests=clean air

Active forest management optimizes sequestration and storage

Maintains ability to sequester in future

Managed forests are carbon sinks

Managed forest=thriving forest

Working forests increase carbon capture and carbon storage

Working forests are able to adapt to climate change

Productive forests, wood products create incentive to stay in forestry

wood products fight climate change

50% of tree's dry weight is carbon

Wood reduces reliance on fossil-fuel intensive products

Wood meets demand for renewable products

**Fight climate change.
Use wood.**
